Profile

Computing graduate with practical experience building cloud infrastructure, containerised applications, REST APIs and automated deployment pipelines using AWS, Docker, Terraform and GitHub Actions. Combining technical problem-solving with strong communication skills, with a particular focus on Solutions Engineering, Cloud and AI.

Projects

Automated Cloud Deployment Pipeline (Final Year Project) 2025 – 05/2026

- Built an automated CI/CD deployment pipeline for a containerised Python Flask application using GitHub Actions, Docker, Amazon ECR, and AWS ECS Fargate.
- Provisioned AWS infrastructure with Terraform, including ECS services, VPC networking, IAM roles, security groups, and an Application Load Balancer.
- Implemented secure deployment automation using OIDC authentication between GitHub Actions and AWS, avoiding long-lived access keys.
- Configured ALB routing and /health endpoint checks to validate ECS task health and deployment availability.
- Debugged and resolved deployment issues involving Docker image architecture mismatches, ECS task failures, ALB health checks, and IAM permissions.
- Evaluated platform reliability, scalability, deployment consistency, and operational maintainability through end-to-end testing and deployment validation.

Containerised SaaS Backend — "Mingle" 10/2025 – 12/2025

- Developed and deployed a RESTful SaaS backend using Node.js, Express, and MongoDB.
- Implemented JWT authentication, role-based access, and secure password hashing.
- Containerised the application using Docker and Docker Compose.
- Deployed and configured the system on Google Cloud VM infrastructure.
- Tested and validated API endpoints using Postman and documented deployment processes.

AI Automation SaaS Concept — "Optevo" 11/2024 – 01/2025

- Designed and prototyped an AI-powered SaaS platform for SMEs, exploring demand forecasting, inventory management, route optimisation and workforce scheduling.
- Built an automated data and forecasting workflow using Python, REST/web integrations, WordPress, WPForms and Zapier, processing submitted business data to generate AI-assisted recommendations.
- Designed end-to-end customer journeys including onboarding, free-trial, dashboard and subscription flows, troubleshooting integrations, redirects and form logic throughout development.

Education

Birkbeck, University of London 2022 – 2026

BSc (Hons) Computing – Upper Second-Class Honours (2:1)

Skills

Cloud: AWS (ECS, IAM, VPC, ALB), Google Cloud, **DevOps:** Docker, Kubernetes, GitHub Actions, CI/CD, Terraform, **Backend:** Node.js, Python, Express, **Databases:** MongoDB, MySQL, **Systems:** Linux, Networking Fundamentals, **Tools:** Git, GitHub, Postman, **AI & Automation:** OpenAI/LLM APIs, Prompt Engineering, Zapier, Claude, Gemini, GitHub Copilot

Professional Experience

DevOps Engineer Trainee 2026 – Present

CoderCo

- Currently completing structured training in Linux, Bash scripting, Git, networking, Docker, AWS, Terraform, CI/CD, and Kubernetes.
- Practising system administration, containerisation, and cloud deployment in lab environments.
- Applying troubleshooting and debugging techniques under time constraints.
- Building secure and reliable infrastructure using industry-standard tools.

Sales Assistant 09/2022 – 08/2024

Dunelm

- Delivered consistent customer service in a fast-paced environment.
- Demonstrated reliability, time management, and teamwork alongside full-time study.
- Communicated clearly with customers to resolve issues in a fast-paced environment.
